

ARUBA'S SAFER & STRONGER NETWORK OFFER

Healthcare organizations get a User Experience Insight Sensor Starter Kit!

Aruba User Experience Insight (UXI) enables healthcare IT professionals to ensure network performance and conduct remote troubleshooting for new, existing or temporary clinical, research and health care environments. These new locations, such as drive-through screening centers or triage units, need to function without any on-site IT staff. Aruba UXI allows the network operator to truly understand user experience and is ideal for deployment in locations that are difficult to get to—especially during challenging times for healthcare.

With sensors that are easy to install, Aruba UXI continuously runs pre-defined or customizable tests on network services and applications over wireless and wired connections, with integrated LTE for resiliency. Combined with a simple cloud-based user interface, Healthcare IT gains a real-time view of any vendors network and reports application performance the way users experience it. Additionally, Aruba UXI will help validate any network changes made and significantly reduce the mean time to identify issues.

BENEFITS OF MANAGING USER EXPERIENCE

- Ensure network performance when it is most needed. When facing a global challenge, the Healthcare IT network must simply work.
- Strengthen clinician services and patient care with a personalized understanding of network health.
- Optimize the availability of services and assets such as Guest Network, IT/Clinical Applications.
- Better use of budgets
- Ability to better manage temporary network projects – Remote/temporary facilities, and Teleworkers.
